Zhejiang Plasméd Medical Technology Co., Ltd. "PLASMED" is a manufacturer of disposable medical consumables. Our headquarter is in Hong Kong, China mainland plant has commenced operation since 2006 and located at Taizhou City, Zhejiang Province, China. The authorized capital is US \$ 1,400,000. The Company was renamed as PLASMED in Feb. 2011.

We focus on providing disposable medical plastic supplies to hospitals, universities, research institutes, laboratories, testing centers amongst other entities in medical, biological and chemical industries. We have 18 categories with more than 400 types of products, including cuvette and sample cups, petri dish/culture plate, centrifuge tube/freezing tube, pipette tip/conductive tip/filter tip, pasteur pipette/serological pipette, test tube/tube rack, measuring cup/sputum cup/urine (excrement) collection cup/medical cup/dressing disk series. We are capable to tailor-made in-house customized molds to fit customers' requirements. Brand "Plasméd" has entered the Japanese market since 2012. Plasméd has been a designated agent in China of EBRO, a Germany temperature monitoring instrument manufacturer from 2017. Plasméd obtained the design patent of new interpretation of screw line "Locking Feel" in 2018. Another 2019 new product, self-developed "Fast Urine Collection Tube" is thought over the different application of users and inspectors.

Our plant is around 10,000 sq. meters. We have Class 100,000 purification room, clean room, sterilization room and qualified for ISO9001, ISO13485, 98/79/EC. Currently some products also meet the requirements for being Dnase / Rnase & Pyrogen Free.

Our products with brand "Plasméd" / OEM are well known in worldwide markets. Our customers are from America, Europe, Asia, Australia, Middle East, Russia, domestic and Hong Kong.

We are looking forward to working with you and thank you for your trust in advance.

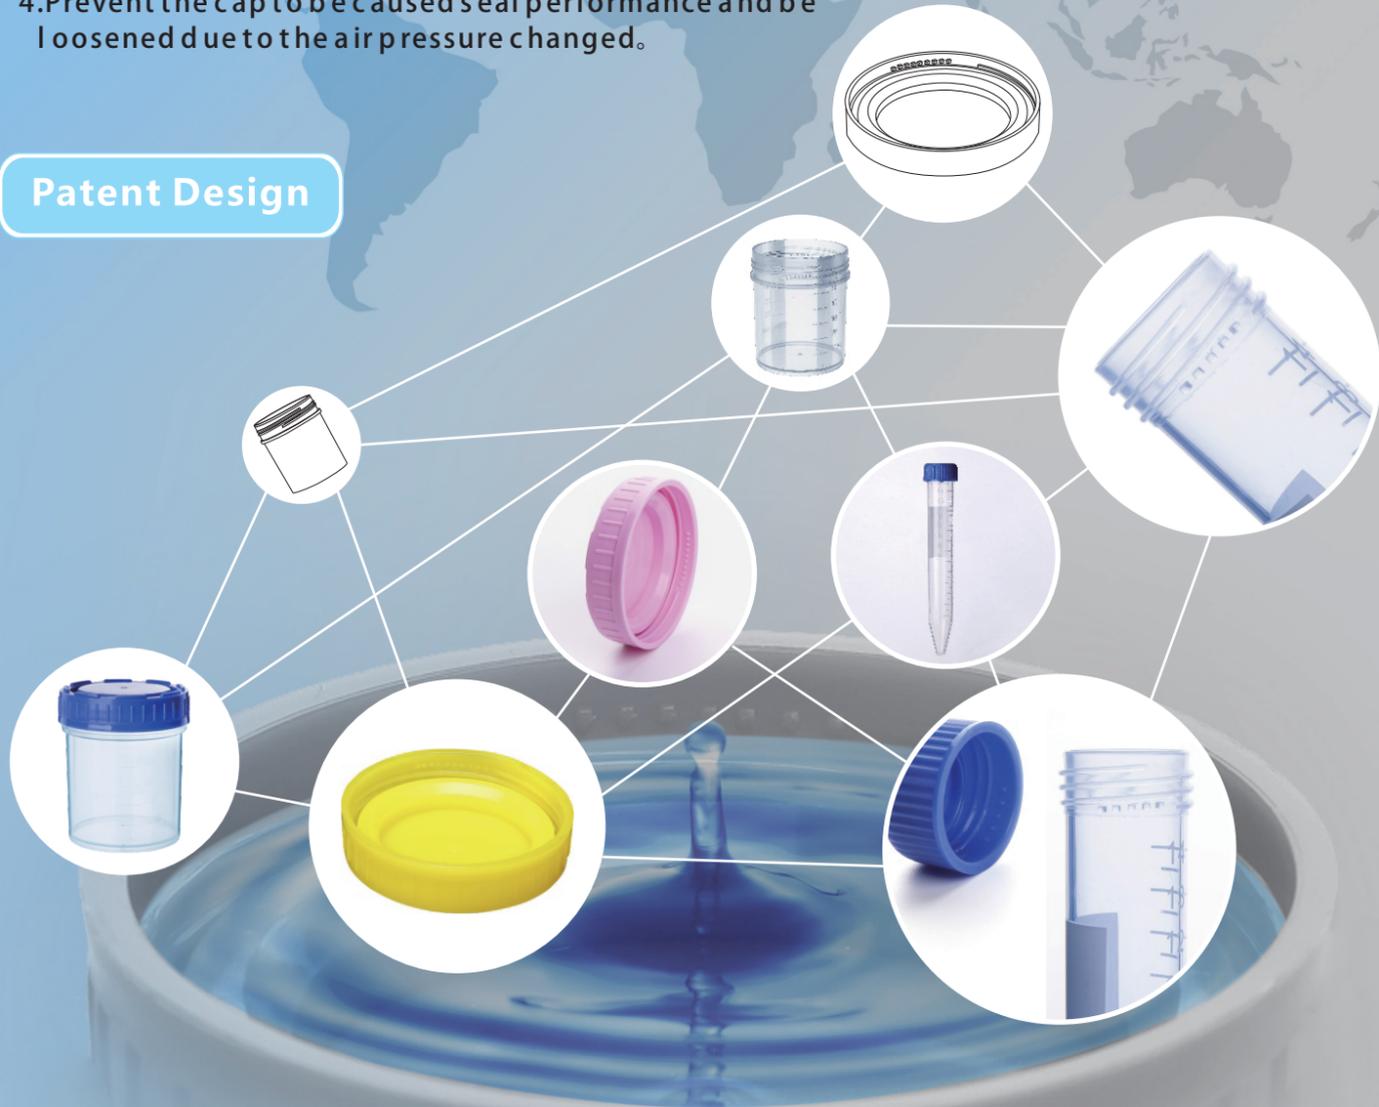

Plasméd Quality, Integrity, Realistic

New Interpretation of Screw Line "LOCKING FEEL"

Features of Locking Feel Screw

1. Can feel the locking point and the correct tighten action;
2. By land/sea transportation, prevent the cap to be caused seal performance and be loosened due to swing, friction and rocking;
3. Tightness can be achieved to 95 kPa
4. Prevent the cap to be caused seal performance and be loosened due to the air pressure changed.

Serological Pipette

Serological pipettes are made of medical grade high-grade polystyrene (GPPs). The universal design can be suitable for most pipette-aids. Six different sizes with Gamma sterile or non-sterile are available.

Features:

1. Adopt medical grade high-grade polystyrene to make, the pipette can be excellent for clear observation and reducing liquid attachment on the pipette surface to assure accurate delivery.
2. Clear and bidirectional graduations on the pipettes, negative graduation allows additional working volume.
3. Filter plug prevents overfill.
4. RNase/DNase-Free, Non-pyrogenic.
